Module 1: Installation & Introduction to UI of Tableau

Tableau is **business intelligence software** that helps people see and understand their data.

Fast Analytics

Connect and visualize your data in minutes. Tableau is 10 to 100x faster than existing solutions.

Ease of Use

Anyone can analyze data with intuitive drag & drop products. No programming, just insight.

Big Data, Any Data

From spreadsheets to databases to Hadoop to cloud services, explore any data.

Smart Dashboards

Combine multiple views of data to get richer insight. Best practices of data visualization are baked right in.

Update Automatically

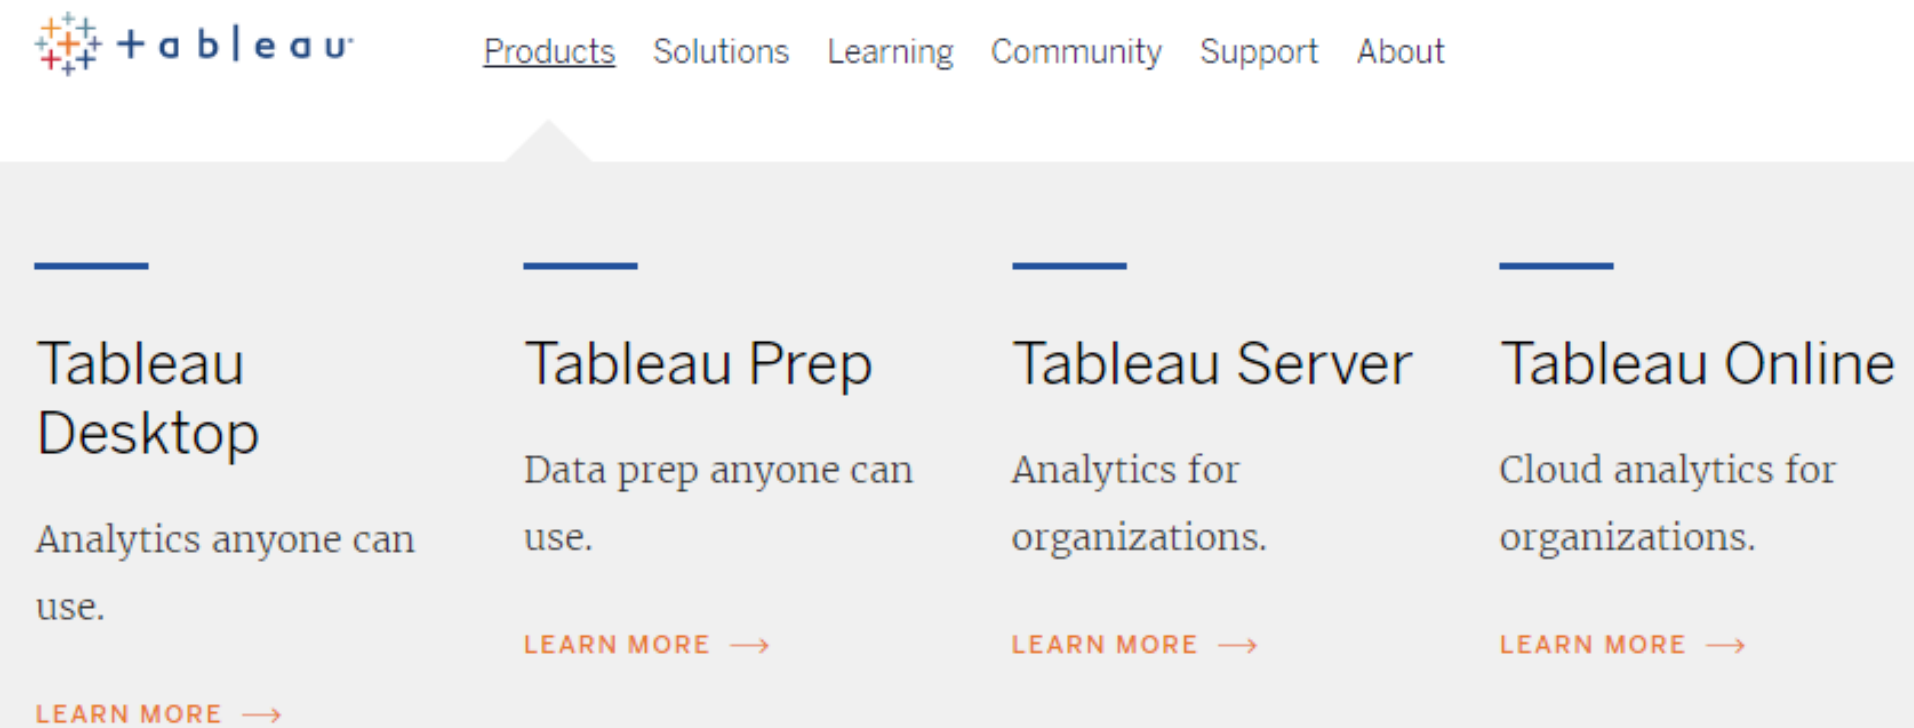

Get the freshest data with a live connection to your data or get automatic updates on a schedule you define.

Share in Seconds

Publish a dashboard with a few clicks to share it live on the web and on mobile devices.

Tableau is **paid BI tool**, with a 14 day free trail on all the below products.

The image shows the top section of the Tableau website. At the top left is the Tableau logo, which consists of a cluster of small blue and orange plus signs followed by the word 'tableau' in a lowercase, sans-serif font. To the right of the logo is a horizontal navigation menu with the following links: 'Products' (underlined), 'Solutions', 'Learning', 'Community', 'Support', and 'About'. Below the navigation bar is a light gray section containing four product cards. Each card has a blue horizontal line at the top, followed by the product name in a large, dark blue font, a short description in a smaller, dark blue font, and a 'LEARN MORE' link with an orange arrow pointing right. The products are: Tableau Desktop (Analytics anyone can use), Tableau Prep (Data prep anyone can use), Tableau Server (Analytics for organizations), and Tableau Online (Cloud analytics for organizations).

Tableau Desktop	Tableau Prep	Tableau Server	Tableau Online
Analytics anyone can use.	Data prep anyone can use.	Analytics for organizations.	Cloud analytics for organizations.
LEARN MORE →	LEARN MORE →	LEARN MORE →	LEARN MORE →

For Students & Bloggers use **Tableau Public**, download from : <https://public.tableau.com/s/>

Its always free, although with limited functionalities.

Tableau : Quick Intro :

- ✓ Tableau is a Business Intelligence tool for **visually analyzing the data**.
- ✓ Users can create and distribute an interactive and shareable dashboard, which depict the trends, variations, and density of the data in the form of graphs and charts.
- ✓ Tableau can connect to files, relational and Big Data sources to acquire and process data. The software allows data blending and real-time collaboration, which makes it very unique.
- ✓ It is used by businesses, academic researchers, and many government organizations for visual data analysis.
- ✓ **It is also positioned as a leader Business Intelligence and Analytics Platform in Gartner Magic Quadrant.**

Get Started

There are three basic steps involved in creating any Tableau data analysis report.

These three steps are -

- 1. Connect to a data source** - It involves locating the data and using an appropriate type of connection to read the data.
- 2. Choose dimensions and measures** - This involves selecting the required columns from the source data for analysis.
- 3. Apply visualization technique** - This involves applying required visualization methods, such as a specific chart or graph type to the data being analyzed.

The only way to learn a BI tool like Tableau is to try-out different options , functionalities and capabilities. This can be done by solving simple problems. **Download from the given link "tableau try-outs.txt".**

(https://drive.google.com/open?id=1N5Vf6YJPz_d9qVv5WCY92NQxEqjhVOzV)

Related to the try-outs , screen-shots of the expected outputs for certain problems have been put into this e-book.

This e-book also contains minimal and necessary theory.

drill down / up to see the effect

In case if you see breaks in forecast , choose forecast on "Attribute" instead of "Dimension"

Introduction to Dashboards & Story Board

As Tableau helps in analyzing lots of data over diverse time periods, dimensions, and measures, it needs a very meticulous planning to create a good dashboard or story. Hence, it is important to know the approach to design a good dashboard. Like any other field of human endeavor, there are many best practices to be followed to create good worksheets and dashboards.

Though the final outcome expected from a Tableau project is ideally a dashboard with story, there are many intermediate steps which needs to be completed to reach this goal. Following is a flow diagram of design steps that should be ideally followed to create effective dashboards.

Case Study :

Story Board is a great tool by tableau. It allows us to communicate our analysis to the audience or management very effectively. This Try-out is a teamwork, *with out the assistance of the Trainer*.

The team has to do the following in 3 hrs :

a> go to <https://onlinehelp.tableau.com/current/pro/desktop/en-us/help.htm>

b> Explore the help section

c> go to section "Create Stories". Explore all sub-sections.

d> Now choose a sensible data-set (other than SuperStore). You may refer <https://toolbox.google.com/datasetsearch> for finding the right data-set.

e> Tell me your analysis through your Story.
